

XM Radio provides content that is no available on "traditional" radio. Providing local content such as traffic and weather only improves their service. I personally love my XM service and find it far superior to "traditional" radio. Furthermore, I pay for my XM service and it is no for the National Association of Broadcasters to dictate what I can or cannot hear. Please reject the NAB's petition 04-160, which does nothing except ask you to stomp the First Amendment into the ground.
